

Well Site reconfiguration

HWY 84 location

This project involves most of the components located at the 84 Pump Station. Many of the pumps and other equipment used to manage the water system have been manipulated over the last 40 years and are located throughout the property. This reconfiguration will better organize these components and allow room for expansion to better serve the customers served by this site. This project will move all the components to a central building located on the property. This building will be compartmentalized to accommodate all the specific tools used in water production and distribution. The provided map shows the location of this well site.

This project does not anticipate any disruption in service to customers. If you have any questions please let us know either by phone or email listed below.

Phone numbers to have:

CP&Y office: (254)772-9272

Project Manager, Scott Wetzel, P.E. (254)772-9272

Email: swetzel@cpyi.com

City of Woodway: (254)772-4050

Director, Mitch Davison, P.E. (254)772-4050

Email: mdavison@woodwaytexas.gov
