Project No. 1-03555 – Acorn Well Pump Station Improvements

Acorn Well Pump Station Improvements consists of but is not limited to all labor, materials, equipment, appurtenances, and incidentals as required to properly install, complete and be accepted in place a new concrete masonry unit (CMU) building to contain an electrical room, chlorine room, and liquid ammonium sulfate (LAS) room. The existing site includes a water well and above-ground 300,000-gallon storage tank originally constructed in 1985, pumping facilities, electrical equipment, chemical equipment, and hydropneumatic pressure tank. A subsequent improvement project was constructed in 1999 that included upgrades to the pumping and site piping along with a new pressure tank and improvements to the chemical injection system. This proposed project will leave the existing well, ground storage tanks, pumping system, and pressure tank in-place and consolidate all electrical and chemical equipment into a single building with all necessary components as shown on the project drawings and as specified herein. Project will be awarded to proposal providing best value to Owner based on a number of factors including cost, experience of contract, and prior work performance.

Proposals must be submitted on forms provided in Proposal Documents and accompanied by a Proposal Security in the penal sum of not less than five percent (5%) of base proposal amount, payable without recourse to Owner. Proposal Security may be in either form of a cashier's check or Offerer's Bond from a security company approved to conduct business in State of Texas as a guarantee that offerer will enter into a contract and execute a 100% payment bond within fifteen (15) days after issuance of a notice of award to that Offerer. Proposals not accompanied by such Security or received after designated proposal time will not be considered. Refer to other proposal requirements described in Document 00 21 13 – Instructions to Offerers.
